come trasformare lo smartphone in uno strumento musicale

Relatori

Romain Michon

CCRMA Stanford University - GRAME, Lyon

Stefania Serafin

Aalborg University, Copenhagen

In this workshop, participants will learn how to use the Faust programming language (<https://faust.grame.fr>) to design apps to turn their smartphone into musical instruments. Simple sound synthesizers controlled by the built-in sensors of the device (i.e., accelerometer) will be implemented from scratch using basic math.

After an introductory session, participants will have time to work on their instrument and perform with it.
